(Audio Review:) That is not true. The 7 is the date, the 4 is the hour. How did you come up with that? The date that they were broadcasting, is April 7th, 2012. (7:04) I hope it's not true. Thanks so much for contacting me! Welcome! I think I have the same exact problem. Ok, so I've tried everything. I tried reinstalling it, I reset my system back to factory defaults, and it still won't work. If you can, send me a screenshot of what's happening when you try to open up the recording. What are you referring to by "it won't work"? What happens? It's working. I just don't have any sound in the app. Of course it won't work if you have no sound! The only sound I can hear, is from the app when I press the "Record" button. (0:18) Oh, I see. So maybe just double click on the reaper 4.22 license key.rar? No, I don't think it has anything to do with the sound. I'm going to assume it's a glitch. A bug? Yes. I'm going to try to open up the recording. Oh, what? It's just not working. I don't know what to do, I'm running Windows 10. I'm sorry. I'm going to try to open up the recording. I'm going to try to open up the recording. I'm trying to open up the recording. Ok, I don't have any sound on the app, or the recording. Oh my god. Do you know what I'm going to have to do? I'm going to be sad. Ok, I'm going to leave a comment to the developer. I'm going to be on the lookout for a fix, and I'll make sure to let you know! What's the name of the application? You know what to do, right? 2d92ce491b
