Allows users to automate common computer actions using keyboard shortcuts. It will try to identify actions and create keyboard shortcuts for them. KEYMACRO is a useful utility which helps users identify and make shortcuts for actions on their computer. Users simply set up the actions and navigate to the relevant tool, and press a specific key combination to execute the action. In case it isn't available for the tool that was chosen, users can manually change the action. It is possible to make shortcuts for various actions, including changing text size, changing character or paragraph spacing, and more. It is important to note that the shortcuts created are entirely up to the user, and it is possible to implement custom shortcuts for the application. They don't interfere with any other shortcuts that may be installed on the computer. All the available shortcuts are listed in the shortcut manager. Objectives 1) The program would try to detect actions that can be automated by keyboard shortcuts, and create shortcuts for them. 2) The user would be able to change these shortcuts at any time. 3) The application would try to identify most of the actions available by default, and create shortcuts for them, if they aren't detected. 4) The program would detect the most common actions that users perform on the computer, and create shortcuts for them, if necessary. 5) The application would list the possible keyboard shortcuts, to make things easier. 6) The program would save the shortcuts in a text file. 7) The shortcuts can be named in many ways.
