KeyMacro is a simple, but extremely powerful program, designed to create macros for MS Word and Microsoft Office. KeyMacro is a simple, but extremely powerful program, designed to create macros for MS Word and Microsoft Office. The user interface of KeyMacro has a very simple look and it is easy to create your first macro. Starting a new macro requires inserting your macro code, followed by selecting the type of macro you would like to create, and providing the number of copies you would like to use. After you have defined the type of macro you would like to create, simply press the Next button to insert the macro code and define the parameters. Your code will be saved in the Document's MyMacros folder and you can select a macro to edit it. The Macro editor provides an extensive list of tools to change the syntax of the selected macro. The most important of these tools are: The text selected can be edited in any way you want, simply drag and drop it, and delete it by simply pressing the Delete button. Using the Paste icon, you can paste any text from any other file into your document. The controls in your document can also be modified using the Paste tool. If you paste an object from one document, the pasted object will also be copied in your document. One of the powerful features of KeyMacro is the ability to highlight a block of text, copy it, paste it anywhere in your document or save it as a new macro. This is extremely useful for those who need to apply the same formatting or features to large blocks of text. By pressing the Toggle keyword command button, you can display any code in a different language. You can create multi-language macros by simply defining several macros with the same name, and then selecting the language of the macro you want to apply. There is a powerful text-alignment tool in KeyMacro, which is designed to align text in any way you want: left, right, center, justified, letter, ruler, and top or bottom, using the specified units. The last feature of this tool is to place text next to or over any element in your document, by using the Display tool. KeyMacro also provides an extensive, and powerful, Macro recorder. This enables you to record whatever actions you perform in the document. Afterwards, it can be edited and it will have the recorded actions, so you can review it and play them, as well as edit 70238732e0

Keymacro is a simple macro based function replacement for Quicken/MS Money Keymacro. It eliminates the need to go through the cumbersome process of modifying the keyboard layout to be able to use keyboard shortcuts. Keymacro allows you to enter all of the keyboard shortcuts with the press of a button, while maintaining Quicken/MS Money compatibility. Keymacro has the same ease of use and less headaches as Quicken/MS Money Keymacro makes setting up keyboard shortcuts quick and easy. Keymacro can read and record Quicken/MS Money keyboard shortcuts, but cannot modify them. This is so you can have consistent keyboard shortcuts no matter which version of Quicken/MS Money you have. Using Keymacro, you can use any keyboard shortcuts that Quicken/MS Money offers. Keymacro will automatically show the keyboard shortcuts you use in the program. When you learn a new keyboard shortcut, simply save the shortcut to Keymacro's shortcut history. You can easily save your shortcut history to either a.txt or.ini file. Keymacro can auto record keyboard shortcuts from the keyboard and the mouse. Keymacro will work with Quicken/MS Money 1, 2 and 3 Keymacro's keystroke list includes all the keyboard shortcuts available in Quicken/MS Money Keymacro is not a replacement for MS Money's Keymacro. If you have problems using MS Money's Keymacro, we suggest you try Keymacro. WHAT'S NEW IN VERSION 6.0 Added support for As noted in the user manual, you can now use the printer for checks. Added "Auto-Complete" feature. Type any 3 letters in the "Search" or "Account" field and your checks will be completed. Added several features to the printer. The printer will now also handle a range of checks, will count, total, and print blank lines, and will print the balance on checks. Reminder field can now be used to keep track of your reminder from the last time you checked a check. Improved scanning function and overall performance. Now includes support for all the checks from all
