the prior art are a number of systems for vehicle instrumentation. Among the more
common of these is the electronic dashboard. The electronic dashboard system
provides a variety of information to the driver. This includes information about the
status of the various systems on the vehicle such as speed, fuel consumption, engine
temperature, etc. In addition, this includes such things as warning or alert messages
such as “Low fuel”, “engine overheated”, “check engine light”, etc. The electronic
dashboard system also provides information which is used to assist the driver in their
operation of the vehicle. For example, the electronic dashboard provides the vehicle
operator with operating gauges such as a speedometer, a tachometer and a trip meter,
etc. It also provides driver information such as the driver's blood pressure, fuel
consumption, engine temperature, and the like. More sophisticated electronic
dashboards also provide the vehicle operator with information which is helpful to the
vehicle operator in their operation of the vehicle. For example, there are currently
electronic dashboards which provide information about the vehicle's tire pressure and
the condition of the vehicle's windshield wipers. For most vehicles, the dashboard is
attached to the vehicle's instrument panel. This allows the dashboard to be easily seen
by the vehicle operator. However, many vehicles do not have such an instrument panel.
For example, a car without an instrument panel, commonly referred to as a “glove
box”, has the dashboard mounted to the roof of the vehicle. This makes the dashboard
difficult to see for the vehicle operator. For this reason, there is a demand for a system
for providing information to the vehicle operator which is readily visible to the vehicle
operator. Most vehicles also include a vehicle operator's seat. Often, the vehicle
operator's 2d92ce491b
