Additionally, do not spread this information in areas where it could be illegal, such as the spam folder of your mail provider. Thanks. PS: For those who wish to remove the link, I can put it in a custom post which I have had up for a long time in my profile. The link is in my "comments" tab. [EDIROL Hyper Canvas VSTi DXi v1.6.0 (TEAM AiR)]

Download

. -endian..com/c/Nhhobanf/14-edirol-hyper-canvas-vsti-dxi-v160-team-air-ray- . Q: SolrFieldType with the choice filter (2 options) I'm new with Solr. I have a field that should be filtered depending on what the user choose. I've studied the tutorial of Solr, and I've tried to apply the code in this example, but I don't achieve what I want. So if I write that in the schema.xml: I get that query: and $(\text{score}(\text{geog}/^{\wedge}\$2^{\wedge}\$3\$4^{\wedge}\$5/2.0) / 2.0) = 2$ And I could write an if statement inside the request handler: `if(geog.endsWith("$2") == true) //...` But I want that the user will choose one of the options I have inside the file synonyms.txt. In the example fieldType the field defines that there are two options ba244e880a
