KeyMacro is a multilanguage macro recorder with keyboard Shortcut feature. You may capture any keystroke and record a short macro string and, with a simple shortcut, you may perform the same action in your computer. KeyMacro can record only one macro at time. All captured macros are saved in a predefined file. How to use the record mode: 1.- Click the Record button, a dialog box is shown, with a predefined file name. 2.- Type the string you want to capture (including the first characters and the last), select the language and click OK. 3.- You may now play the recorded macro. For more information, read the ReadMe file, included in the archive. News Important notice: The source code of Filmerit application is available to you only in one version (The original).
