A Dental Implant is a tooth root replacement that can be used to fill in multiple missing teeth. There are several options for placing Dental Implants in your mouth. Some Dental Implants are placed directly into the jawbone and have a screw-like extension called an Abutment that helps keep the tooth attached to the implant. Other Dental Implants are cemented over the gums and are designed to stay in place for the rest of your life. Dental implants are natural looking and do not require any special equipment to install them. Professional Dental Implants Placement Dental Implant - CT Dental Specialists Dental Implant Procedure and Materials. Dental Implants are a permanent tooth replacement procedure that involves placing an artificial tooth root in your jaw. During your initial appointment, we will take several X-Rays and make a mold of your jawbone. This mold is used to create a unique implant that is the exact size of the tooth root that is missing. The implant is placed into your jawbone and becomes a permanent part of your jaw. What is a Dentist? The Dental Implant Procedure. Your tooth will be removed and replaced with an implant, a device made of titanium that will become part of your jawbone. After your tooth is extracted, we will position and cover the implant with a protective cover that will allow it to heal properly. A healing cap will be placed over the implant. This helps protect the implant and cover the area while the bone heals. You will
