Doesn't need setup There is no setup pack involved, so you don't have to go through an installation process. Memory Test is packed in a single.exe file that can be saved to a thumb drive and effortlessly launched on any PC. There are no software requirements involved. Memory Test tells you on every turn whether you're right or wrong. If you're wrong, it displays the correct answer. There are no other notable options provided by the software developer. Unfortunately, it's not possible to skip any letters or to write fewer words than all 26 letters of the alphabet.
