Guitar Guru Description: Guitar Guru is lightweight Windows application whose sole purpose is to help you improve your guitar playing skills and getting accustomed with the notes. It can be used for educational purposes, as it comes packed with several preset songs which are played at the guitar. Guitar Guru boasts a clean and straightforward layout that gives users the possibility to zoom in or out of the working environment, tune their guitar by hearing the correct audio sound, select from different preset songs, and view how the strings are strummed or plucked. What's more, you can play, pause, or stop the current audio selection, repeat the songs, enable or disable the metronome, as well as alter the tempo and volume. Guitar Guru gives users the possibility to upload music from audio CDs, or add audio files from the computer, provided that the file format is MP3 or WMA. Other important features worth mentioning are represented by the possibility to mute the sound, play the next or previous audio file, eject the audio disc, change the look of the application by selecting from different colors, as well as set up the microphone parameters. During our testing we have noticed that Guitar Guru provides very good sound quality, and no errors showed up throughout the entire process. Since there aren't many configuration settings, even less experienced users can set up the dedicated parameters with minimum effort. As it would be expected from such a small utility, it manages to remain light on the system resources, so it doesn't burden the overall performance of the computer, nor interfere with other programs' functionality. To sum things up, Guitar Guru offers a handy of parameters for helping you learn how to play the guitar.
