Computer-aided design and fabrication of upconversion-based temperature sensor array for an optical temperature monitoring system. The aim of this work was to design and fabricate a planar upconversion luminescence (UCL) temperature sensor array based on temperature-dependent UCL emission characteristics of NaYF<sub>4</sub>:Yb(3+)/Er(3+) nanocrystals embedded in a SiO<sub>2</sub> matrix. The temperature response of the UCL intensity and spectra was measured in the range of 20-100 °C. The sensing results show that UCL intensity increased linearly with the temperature increasing from 20 to 100 °C, and the temperature sensitivity was determined to be approximately 30.8%/°C. The fabricated UCL temperature sensor array was examined with an optical temperature monitoring system and the measured results were in good agreement with those obtained by an infrared pyrometer. The developed temperature sensor array and the optical temperature monitoring system may be valuable for the application of UCL temperature sensing for temperature sensing in high temperature environments. ## What's New In?

Drawings in the Design Suite can be annotated with extensive and powerful Markup Assist tools. Markups allow you to add labels, comments, and other annotations in your drawings to keep your designs organized. Create and maintain designs with this powerful new concept, and improve design review and analysis with this innovative set of tools. The Markup Assist software (v2019.0.0.1113.03) allows you to do more than just view and edit annotations. Its powerful inline editing tools let you directly edit parts of the drawing with the drawing itself. Improved text formatting in Design Studio with the ability to insert and format images, create graphics, and insert complex formats. Drawings that can be read on iPad: Architectural designs created in AutoCAD are optimized for reading on iPad devices, which is essential for providing accurate drawings and reports on iPads. Easily create and edit complex drawings on iPad devices, and share them through all the common file-sharing protocols. AutoCAD on iPad gives you all the advantages of a desktop-class solution for mobile. Maintain a high-resolution view at any time, while you work on mobile devices. The AutoCAD application automatically detects changes and automatically scales and zooms the document for use on mobile devices. Multiple AutoCAD Apps: Drawing applications can be embedded into other applications, allowing you to work from a single canvas in multiple apps. For example, you can use your iPad to draw on a computer screen or Windows tablet, while you can also use AutoCAD on iPad on a Mac. Continuous Scale: The drawing canvas is scaled automatically to make sure all objects maintain their true scale and resolution. In other applications, objects scale to match the size of the canvas, which can lead to inaccurate scaling and visual distortion. AutoCAD on iPad now maintains the original scale of the objects when they are moved or resized within the application. Improved 2D views: In AutoCAD, you can manipulate the direction of objects in a 2D view by dragging the objects. In AutoCAD on iPad, this feature works in all 2D views. You can also use 2D views to see objects more clearly. Improved 3D views: In AutoCAD, you can manipulate the direction of objects in 3D views. In AutoCAD on iPad, this feature works in all 3D views. You can
