### What's New in the?

Remote Desktop Connection Manager is a very practical application that is ideal for working remotely, as well as for assigning specific privileges to specific connections. If you want to use Remote Desktop Connection Manager to consolidate several remote connections in a single interface, then, before getting started, you need to create a new group. To create a new group, click the Add button and type a name for the new group. Also, you have the possibility to specify the directory in which Remote Desktop Connection Manager will store all the details about each server, as well as its logon credentials. By default, all the passwords are encrypted and stored locally in a specific location, so each time you move a server between groups, you can be rest assured that all the previous configurations will not change. You also have the ability to specify settings such as gateway, remote sound, and color depth, so you can set a more realistic preview. Worth mentioning is that, by default, servers can inherit their logon settings from the group, thus making a great deal of room for efficiency. Also, before using Remote Desktop Connection Manager, you need to set the local resources to use on each device such as sound quality, remote sound and color depth. If you want to organize different connections inside a single interface, you can easily do that. You can assign a group a personalized name that is not only helpful for you, but also for the people that will be working with it. Before accessing the remote connection, you can specify a list of connections that you want to keep and others that you want to delete. After doing
