Let assume that we have 3 PV, I want to ask which of following two approach is suitable : 1) Allocating a large N amount of space on one of the PV and use that space on the VM. 2) Allocating a large N amount of space on each of PV and use that space on the VM. A: Use one PV for the root and the others to provide disk space, VM's will need about 10% of total space on a PV to perform as required. So divide the PV into 2, 4, 8 or 16 equal partitions for the root and then add partitions for the other VM's. You can use Iextend to expand the root partition on the PV as required. Download iMyFone TunesFix now for free and stay on top of your iTunes library! The iTunes Store is one of the biggest and most important revenue sources of the Apple ecosystem. The app store not only makes it possible for users to buy the new apps and updates as and when they are released, but it also makes it possible for Apple and third party developers to sell their apps and updates. An Apple Store with a reasonable number of customers can, however, give rise to problems for some users. If you have reached a point when you can't buy an update or even download the app, the most likely reason for this has to do with a number of things. The first and most obvious reason for this is that the app store may have gotten infected with a malicious virus. The latter is much less common, but it does happen, as Apple Store is a popular spot for hackers to make money, as well. While the iTunes Store can be cleaned up with no issues by standard software, doing it with the help of a third-party app is the best option. In this case, My iMyFone iPhone Cleaner is the perfect solution. It can act as a reliable anti-malware tool to keep the iDevices safe. The program can scan the system as well as the iTunes library, and in the event of a virus or trojan infection, it can delete any of them that it finds. From there on, it can even help you restore the apps to their previous version, so that you do not lose all of the data the apps contain. If that is not enough, the iMyFone iPhone Cleaner provides a detailed report of the apps found on the system, which helps you understand their purpose. This can be put to use when you need to sort through iTunes data, by the way. Another important thing that comes in handy is the option to organize the apps according to their category, which makes it easier to find the ones you need.
