### **Quake Video Maker Crack + PC/Windows (April-2022)**

Quake Video Maker Cracked 2022 Latest Version is a small program which allows you to create AVI files from videos, images and audio tracks. The interface of the program is plain and simple. You can start a project by adding scenes. So, you can use the sequence wizard to import image file sequences, a still image or from an animation file. In addition, you can set the sequence format, scan frames and preview a selection, mark the starting and ending point, as well as set the duplication factor. Furthermore, you can add transitions and adjust their speed - fade in and out, zoom in and out, horizontal and vertical blinds, and more. But you can also add special effects which focus on overlay, motion blur (set the intensity from "light" to "heavy"), monochrome (set the HUE), PIP and Luma. Moreover, you can duplicate a scene, include a soundtrack (optionally truncate or loop if needed), preview results, as well as set the frames per seconds, width, height and resize policy of the movie. Once you are satisfied with the results, you can generate an AVI file. The program uses a moderate amount of system resources and includes a comprehensive help file. Quake Video Maker didn't freeze, crash or pop up errors during our tests.

On the other hand, the program could use some adjustments when it comes to its interface. First-time users can find it difficult to navigate within it, although the features are generally easy to comprehend. All in all, Quake Video Maker is a very good tool for creating AVI movies from image, audio and video files and we strongly recommend it to all users.
