The chiral stereoisomers of the alkaloids ent-kauran-16 α -ol A (1a,b) and T-2 toxin (2a,b) were synthesized via the corresponding Mannich reactions between 4-bromobenzaldehyde, (-)-ephedrine, 1,3-dimethyl-5-phenyl-2-pyrazoline, and aromatic amines. The optical rotations and circular dichroism (CD) spectra of (1a,b) and (2a,b) were discussed in detail. The main focus was on the selectivity of [1a,b] to DNA intercalation and their cytotoxicity in vitro against the tested murine and human tumor cells. The results showed that (1a,b) and (2a,b) can intercalate into DNA and possess similar activity for DNA intercalation in vitro. However, (1a,b) is a stronger intercalator of DNA than (2a,b). Moreover, (1a,b) exhibited a highly selective cytotoxicity to the murine leukemia L1210 and human tumor PC3 cells, with IC50 values of 12.1 and 19.9 $\mu\text{mol}\cdot\text{L}^{-1}$, respectively. These compounds are new chiral stereoisomers of ent-kauran-16 α -ol A (1) and T-2 toxin (2), respectively, which show great potential for further biological investigation. Dynamics of a microcapsule supported by a nanograined surface. The interaction between a colloidal sphere and a nanograined surface is investigated theoretically. It is shown that in an ultrathin adsorption layer the attractive interaction with the surface is due to the dispersion force of van der Waals type. In a case where the interaction between the microcapsule and

Scroll In Screenshots: 1. Field of the Invention This invention relates generally to the art of electrographic printing and more particularly to the art of establishing a fluidic link between an electrographic printer or copier and a controller for the printer or copier. 2. Brief Description of the Prior Art Electrographic printers or copiers which are coupled to a host computer or other controller for the printer or copier are known in the prior art. These printers or copiers are typically referred to as xe2x80x9csoftware printersxe2x80x9d. The host computer stores the printing software necessary for the controller to print the desired data. It is also known in the prior art to couple an external control module to the printer. The external control module may be coupled to the printer through a cable, or it may be integrated into the printer. In either event, the external control module is separate from the host computer, and therefore, the external control module must be separately housed and connected to the host computer. This arrangement can be difficult to implement in small devices, such as personal computers, where space is at a premium. The present invention provides an electrographic printer or copier having an internal control module which is integral to the housing of the printer or copier. The internal control module serves to couple the printer or copier to an external host computer through a serial communications link. In this manner, the electronic printing device and the printer controller are combined into a single integrated unit. In a first embodiment of the present invention, the internal control module is a microcontroller. The microcontroller has a serial communications port which serves to connect the microcontroller to a host computer. The internal control module is coupled to the 77a5ca646e

Q: How can we check $M = \mathbb{C} \times \mathbb{C}$ is a 2 -dimensional vector space or not? If V is a 2 -dimensional vector space and $T: V \rightarrow V$ is a linear transformation and if $w \in V$ such that $T(w) = 0$ then how can we check $M = \mathbb{C} \times \mathbb{C}$ is a 2 -dimensional vector space or not? A: Note that $V = \{(x, y) : x, y \in \mathbb{C}\} \cong \mathbb{C}^2$ with $(x, y) \mapsto x + yi$ is a linear isomorphism, which proves your claim.

Cloud technology: The state of the art As the cloud technology has evolved, it has also changed the way customers access and use cloud solutions. The business world is now adapting to cloud systems at a rapid pace, setting the stage for the next evolutionary phase of the cloud. It seems like everyone is talking about the cloud these days. Businesses have been talking about it, they have been investing in cloud solutions, they have been trying to understand the cloud, and they have been looking for ways to integrate the cloud into their own business strategies. But what exactly is the cloud? Cloud computing is a broad category that includes many different concepts, including on-demand utility computing, software-as-a-service (SaaS), software-defined everything (SDx), infrastructure-as-a-service (IaaS), and many others. The U.S. Department of Commerce is currently holding a workshop to further define the concept of
