Time it takes to compress a file What's New in This Version: Minor bug fixes There's also a not-so-fine print Conclusion It is not recommended to select the compression option in a multi-file scenario, as it will end up being a bit unpredictable. What's worse, you're also unable to decompress the contents, so it's best to just keep these compressed files to a bare minimum. Is there a version of this software you can install? Yes, the author offers a portable installer that can be installed on a thumb drive, along with software for decompressing compressed files. A new study has been released suggesting that the demise of a North Korean missile test could be linked to natural forces. Just as there are no rules of physics that rule out the possibility of supernatural phenomena, there are no clear rules governing the behavior of nuclear weapons. At the high-power end, nuclear weapons are hard to make. At the low-power end, they are very hard to control. It's possible for a nuclear explosion to go off at the wrong time. It's possible for the wrong thing to happen when the wrong people are playing with the bomb. The question is whether nuclear weapons make a surprise attack on America a certainty, or a possibility. We've only had to use nuclear weapons once in history. On July 20, 1945, the United States dropped the bomb on Hiroshima, Japan. The first nuclear explosion in history, an event that the world has been wanting to forget since its conclusion. We've seen a number of incidents since then that seem to confirm that there are limits to what nuclear weapons can do. In 1961, a B-52 flew across the Caribbean and carried a nuclear bomb. The Soviet Union put a nuclear-tipped missile in Cuba that was mistakenly hit by the US military. The US blew up the Russian military base in Cuba in 1962. The Soviet Union responded by placing nuclear-tipped missiles in Cuba. It's been fifty years since all of this happened and there are still diplomats trying to figure out what to do. The United States has tested a number of nuclear weapons over the years. There's always a risk when one of these things goes off that it will go off when someone isn't around. The US has tested multiple weapons that are configured to explode in the air to see how high they can go. Since 1967, the US has spent some \$17 billion on testing nuclear

MAXODBCTXSPACESIZE : Set the maximum number of spaces allowed in the OLE Specification's CHARACTER SET field. This value is used to determine whether the CHARACTER SET field is in its own region (single-byte) or in a region based on multi-byte space values. Using this setting, you can make the CHARACTER SET field act as a region that contains space values, or an extended region that contains multi-byte values. MAXODBCTXSPACESIZE can be used to control the following ODBC functions: DECLARE CURSOR FIELDS, FETCH, OPEN CURSOR, FETCH, CLOSE, and SELECT. MAXODBCTXSPACESIZE is applicable only in the ODBC client driver interface. MAXODBCTXSPACESIZE can be set only once per connection. NOTES: This option is available for Microsoft OLE DB drivers and ODBC client drivers that have the OPTIMIZE FOR DATA SETS capability. This option is not available for ODBC connections that are mapped to the maximum character set (e.g. nCharSet=6). A driver that has not been optimized for data sets does not support the ability to specify this option. See "Numeric Limitations for CHARACTER SET" for information on the maximum number of spaces allowed. MAXODBCTXSPACESIZE can be set for multiple character sets, if the database supports the ability to specify the character set for each ODBC function. Setting this option controls the way characters that are included in the CHARACTER SET field are processed. If this option is set, characters are treated as multi-byte values, even if the CHARACTER SET field specifies a single-byte character set. If the CHARACTER SET field is treated as a single-byte character set, it is not included in the character set used when OPEN CURSOR is executed. To maximize the performance of the database and minimize the number of spaces used in a database field that is CHARACTER SET, specify a value that is larger than the expected maximum number of spaces for the specific database character set. Specifying a value for this option that is larger than the expected maximum number of spaces is not recommended. Setting this option does not affect the maximum number of spaces allowed in the CHARACTER SET field when it is specified in the statement and in the connection 77a5ca646e
