You know how cats like to “rub up” against furniture? Well, this is the equivalent for a ball of yarn. It’s called a bag drop, and it’s the thing that happens when you’re crocheting and you drop a piece of yarn. (It also occurs when you’re learning a new stitch pattern.) It’s not as annoying as the dropping of stitches is, but it does go all over the place. (It gets tangled a bit. Why do I have yarn all over the place, anyway? We’ll talk about that later.) How to Stop Bag Drops When you are crocheting, you may drop stitches, especially if the yarn is very slippery. This is, of course, because when the yarn comes out of the yarn ball, it’s getting flung about by your active fingers. In this case, you can use this solution: Thread your hook through the fabric about 5 inches down from the top of the fabric (or, if you want, through the pieces of fabric that you have already crocheted together), bring the yarn around the hook to the back, and pull it through the loop on your hook. I have my hooks threaded in this manner all the time (unfortunately, I don’t have any of my other yarn to show you that way, because I dropped it all over the place, but, as you can see, it’s fairly easy to locate.) When you feel yourself dropping stitches or balls of yarn (the bag drops) during a crochet session, simply start each stitch as if you were to start it on the hook. This way, you won’t be dropping it. Your yarn will also stay more consistent as you work. Best Ways to Keep Your Yarn Together 1. Attach a Snap Attach a snap (a loop) to your yarn. This way, you won’t have the option of dropping it, as it won’t be unattached 4bc0debe42
