For further troubleshooting information, see this knowledge base article: [A: Warning: This article contains spoilers for the eighth episode of Westworld season three, "Bicameral Mind."](#) Westworld season three has almost always provided a very deep dive into the lore of the series. But last week's eighth episode, "Bicameral Mind," took things in an entirely different direction, delving into a story that only rarely, if ever, comes up in the show. By comparison, season two's "The Bicameral Mind" was almost entirely

narrative exposition about how the hosts experience consciousness — and was actually a pretty interesting episode. This week, "Bicameral Mind" was a season-long investigation into the psychological mechanisms that created the hosts, and delved deep into one of the series' most fascinating philosophical conundrums. "Bicameral Mind" involved Maeve — the female host at the center of the "Westworld" universe, who became a breakout character when she was introduced in 2016's "The Maze Runner" movie — as she tries to escape a Westworld-like environment where she's imprisoned. It's one of the most intriguing questions in science fiction: What does it mean to be human? Here's the thing about hosts in Westworld: They're human-looking and they're programmed with the personalities of various humans. But they're no more "human" than a robot or a magic dagger or a computer, or maybe even a computer program. Maeve believes she is, in fact, a "thinking, feeling, human being" who is born
