Detective Stories Detective Stories is a graphic novel written and illustrated by the webcomic artist (Lazy Cowgirl) and published by DC Comics. Detective Stories is essentially three interconnected short stories, although there is a wider-ranging storyline that encompasses these and is only ended when the final set of strips close. The stories The first story is a collection of five strips made from 2004-2005 in which a private detective (the titular Detective Stories) solves various cases. The detective comes into conflict with a gangster named Roy, and one of the gangsters is murdered by the detective. The gangster's son then organises a group of his followers to kidnap, imprison and execute the detective. The second story is a set of four strips entitled (in order) "The Return of Mr Smith", about the detective attempting to find the gangster's son, the discovery of a mysterious reference to a detective who was hunted by the gangster, and the subsequent revelation of the gangster's son's true identity. The third story is a collection of four strips. Both "The Return of Mr Smith" and the third story are collected in the second volume of Detective Stories. Thereby, a high precision is kept on the image formation position of the laser beam, and the image formation position of the laser beam is highly precisely maintained at the same position. However, in the case that an intensity of a light source becomes unstable and thereby becomes remarkably larger than a predetermined range, there is a problem that a dot formation position deviates from a preset position on the substrate due to a fluctuation in a power output, and thus an image formation position deviates from the preset position, and thereby a non-image-forming part (gaps) of an image is generated on the substrate. For example, in the case that a laser beam is focused on the substrate by an optical lens system, an intensity of the laser beam on the substrate is considerably changed on a surface of the substrate along with the scan direction of the laser beam. The intensity of the laser beam on the substrate becomes equal to or more
