## Kanchana 2 Movie Download Tamilrockers Torrent

kanchana 3 full movie download tamilrockers torrent Wine Enthusiast recently tapped me to answer a few questions about my wines. I thought I'd just share a few answers with you and say a big hello to anyone who is a reader. For the sake of a consistent schedule, we'll be answering three questions every other week, alternating them between the site and Instagram. One of the things I like to do is put a little spin on my wine with some fun details, like this hot pink label.

Q: python: issue with `open` and `urllib.request` I have some issues with urllib.request.urlopen. My code looks like this:

```
#!/usr/bin/env python3 import time import urllib.request import urllib.error import urllib.parse def test(time_data): time_data = time.strftime(time_data) print("time =", time_data) for line in urllib.request.urlopen(" + time_data + '.json?apikey=0'): print(line.read()) test("2020-05-17")
```

and when I run this code, it throws error:

```
Traceback (most recent call last): File "/home/toq/examples/helloworld.py", line 17, in test for line in urllib.request.urlopen(" + time_data + '.json?apikey=0'): File "/usr/local/lib/python3.7/site-packages/urllib/request.py", line 281, in urlopen return opener.open(url, data, timeout) File "/usr/local/lib/python3.7/site-packages/urllib/request.py", line 531, in open response = self._open(req, data) File "/usr/local/lib/python3.7/site-packages/urllib/request.py", line 571, in _open
```
