I have a JavaEE 7 web application that is being upgraded to java 1.7. What is the correct way to incorporate RoboSpice in such a setup? We have WebSpices, there are 'spies'. The only other approach I can think of is to implement a stub by using the original API's and then creating my own stub class. It seems like there is no easy way to use RoboSpice with JavaEE. There doesn't seem to be a RoboSpice jar available. A: You can use the latest release of RoboSpice (v3.1) which is a SNAPSHOT. You can use RoboSpice's class from a Java 7 module. The only thing you need to do is to make sure that you have the version of RoboSpice that is compatible with your version of Java. RoboSpice 3.1 is compatible with Java 7. If you upgrade to a newer version, you can either use the SNAPSHOT, or download the latest release (v3.1) for a particular version of Java. theRenamer Product Key is a modern and versatile renamer for TV shows and movies that takes badly formatted titles and turns them to readable form. Grabs accurate data from trusty websites It is perfectly suited for files downloaded by torrent clients, which usually have cluttered and unintelligible titles that can take forever to rename, especially when dealing with a large collection of movies or shows. The main advantage of theRenamer is that it can process multiple files at a time and the renaming process is done on the spot, too. The changes can be performed automatically inside the source file (if you enable the AutoMove feature), without making a copy of it (seeing as this would be useless, anyway). Its engine relies on major online movie databases such as IMDB, TV.com, EPGUIDES, the TVDB.com and MMA (Mixed Martial Arts) provided by Wikipedia. Prior to

the renaming process, one of these has to be selected as reference. Manually or automatically change titles The main interface sports an appealing design, hinting you on the purpose of each command. Simply select the files you want to rename (hold the Shift key for multiple selections) and drag them to the GUI, at which point you will be automatically redirected to the renaming dialog. If AutoMove is enabled, the titles are automatically changed and if not, you can have the application modify them using the 'Proceed' button. However, it might be a good idea to leave AutoMove disabled, in case you're not happy with the renaming pattern. The solution to this is to use the Settings dialog to customize the naming method to contain exactly what you want. Also from this section, you can manage the list of keywords that will be removed from the original title. To end with In conclusion, theRenamer is equipped with all the necessary skills needed to quickly and efficiently rename movies and television shows. The users benefits from full freedom in what the renaming pattern is concerned. #1 4 Helpfulness Age Range Gender Last Login: November 13, 2012 Midddlem About Midddlem I am a big fan of TV shows and movies.
