A 61-year-old woman with Philadelphia-positive chronic myelogenous leukemia presented with dyspnea and hypoxia. Echocardiography revealed severe pulmonary hypertension. The lung perfusion scan showed perfusion defects of both lungs, but the ventilation study revealed that the ventilation-perfusion relationship was normal. Severe hypoxemia persisted despite mechanical ventilation and blood oxygenation improved with inhaled nitric oxide. The patient was treated with recombinant human erythropoietin but the pulmonary hypertension did not improve. She developed a left-sided pleural effusion, which was drained. Aspiration of the pleural fluid yielded an acellular bloody fluid. Thoracotomy was performed and the pleural effusion was evacuated. At that time, the patient had severe hypoxemia and a pulmonary artery pressure of 100/65 mmHg, and an angiogram was performed which showed no evidence of pulmonary thromboembolism or valvular disease. An exploratory lung biopsy was performed and histologic examination of the lung tissue revealed changes consistent with that of capillaritis. Although isolated pulmonary hypertension is relatively rare in patients with chronic myelogenous leukemia, we believe that this may be an important pathologic factor, given that no other causes of pulmonary hypertension were found. What's New in the Borderlands 3 Save Editor?

===== This is the Borderlands 3 Save Editor. The game has two save editors: 1. Editor for saving Borderlands 3 data, that's in the.btm files. 2. Editor for saving the Borderlands 3 Save data that saves all data from you, not only character, profile and inventory.

===== To find your Borderlands 3 Save Data, go to C:\Users*USERNAME*\AppData\Roaming\Borderlands 3\Saves\SaveData

===== Can I edit it while Borderlands is still running? I need to edit my save file because I want to add new items. If I use the Save Editor, will it corrupt my save file? This could be the case if you edit a save with no fast travel. If you are not sure, please check out the Save Editor Troubleshooting Guide for more info. Hey, just did this for a friend, now her save is corrupted. I went into the 'contents' directory inside the saves folder, theres a bunch of the save data with the file names as "character-XX-XX-XX-XX-XX.bin", how do I open each save file separately and copy to a text editor? I have a question about the Save Editor. It lets you change your name, clothing and equipment and change your stats. But it won't let me change my skin, It will let me change hair, skin and eyes color, but not skin tone, and even if i go into other parts of the app, it doesn't let me change skin. I tried changing my skin, but when I load up the game, it still shows up as dark skin. Also, I tried loading up a previous save and changing my skin, but when I load it up, it will always load up as dark skin, even if I change it back. Edit: Also, when I open the save editor, the second skin I added will not show up when I use the "More skins" filter. Hi! I don't know if this is the right place to ask this question but does anyone know how to add a trainer to this app? I want to make a trainer that will send me custom items after i use a special code! Can I add items to my current save file? The Save Editor allows you to add new items to your save. However, this cannot be done while the game is running, so you will have to exit the game and then run the Save Editor. You can add new items to any of the following places: 1. To your character profile. 2. To your inventory. 3. To a fast-travel point. 4. To a journal entry. Thank you for the previous question. I ran it on my laptop, which is very slow.
