You are free to write it either way as you see fit. There was a time when every file had to have a name. This led to all sorts of crazy naming schemes like Where the file's name is the extension. If it's the file name, then it should be at the end of the line. That's why the creators of the filesystem, POSIX, and ISO, introduced file name encoding in the first place. To prevent people from doing silly things like just writing "a.txt" and thinking that means "a" followed by "t" and "xt". So if we are using a VFS (as we should) that does not restrict the file name to a fixed length, we should follow the convention established in the first place. That way we don't have the problems with file names that we do today.Laundry treating appliances, such as clothes washers, clothes dryers, refreshers, and non-aqueous systems, may have a configuration based on a rotating drum that defines a treating chamber in which laundry items are placed for treating. The laundry treating appliance may have a controller that implements a number of pre-programmed cycles of operation. The user of the laundry treating appliance may manually select the cycle of operation from the set of pre-programmed cycles. The pre-programmed cycles may be selected from a number of possible cycles using a number of different user interfaces. The user interfaces may be relatively simple and not require the user to have a high degree of knowledge of how to select the particular cycle of operation from the pre-programmed cycles.Induction of expression of a reporter gene by heat 4bc0debe42
