**Word:** The word "Photoshop" is pronounced like the name of a famous boxer: Pho-to-scoop. **File format:** Photoshop is the first and only major image manipulation program to have its own file format. This file format is called PSD, for Photoshop. **Tip file:** Photoshop comes with a utility that will convert your Adobe Illustrator file into a PSD file (Tip). **Supported sizes:** Although Photoshop can support a variety of image file sizes, it is primarily designed for use in the digital printing industry with 8- and 10-inch full-page canvases and cover sheets for publication. Because of the complexity of the software and the number of operations that can be performed, it's best to work in the highest resolution possible. All of the image editing procedures are also destructive; that is, if you alter something in Photoshop, it's gone forever. With that in mind, Photoshop enables the use of 1-, 3-, 4-, and 5-megapixel images. **Tutorials:** Within Photoshop (and Adobe's website) are a number of tutorials for specific editing procedures. One of the best for beginners is the **Adobe Dreamweaver Gallery (Dreamweaver Gallery)** ([www.adobe.com/products/dreamweaver.html](http://www.adobe.com/products/dreamweaver.html)). This site includes a tutorial for every aspect of designing with Dreamweaver. After you complete the tutorial, you'll be able to apply your skills to making layouts for websites. **Photoshop's major features** Here are the key features of Photoshop: **File format:** Photoshop is the only major image manipulation program to use its own file format. Instead of supporting the various bitmap formats that are popular in the publishing industry, Photoshop gives you total control over its file format. Thus, you can work with any size, resolution, and color space you want for your image or video project. Although you may have to convert your original raster image to a different file format if you want to use it in Photoshop, the fact that the output is still a raster image in Photoshop makes it a great choice for the fast and easy transference of images to and from CD-ROMs, floppy disks, and Flash drives. **Photomerge:** The Photomerge tool lets you combine multiple images into one seamless, glossy, photo-style image. You can choose from various file formats

## Photoshop CC 2014

In what is obviously an attempt to put the best face on the company's recent troubles, Mastercard is claiming that CEO Daniel Mudd is the one to blame for all of the company's current problems. Mudd decided that instead of adopting the Apple Pay payment platform, which would have resulted in a huge loss for Mastercard, he decided to instead let Apple work with other payment platforms – and as a result, Mastercard earned a small amount of money. As noted by Finance Magnates, citing a report from TheStreet, Apple and Mastercard both agreed on a deal last year that they would work together. That effort became successful and allowed Apple to start using Mastercard's payment technology across its various platforms. Part of the reason why Apple decided to use Mastercard's payment technologies was to maintain high security. That's critical as we now live in a world where anything that's happening on our smartphones needs to be as secure as possible. However, in the wake of the recent reports of a massive data breach at Mastercard's headquarters, it seems that Mastercard was willing to cut a deal and allow the company to take some "security" risks to get the payment systems it wanted. Now, Mastercard is claiming that it believes that it was Apple's decision to instead of going with Apple Pay, and that the company was willing to take some risks. However, it seems that this agreement was done in 2014, and as of now, Apple Pay has begun working on a new version that will allow it to work with both Android and iPhone users. In other words, the agreement did have both sides make some compromises, but it seems that now Apple has come around on this, it would like to get out of the deal. However, as noted by a CNBC article, Mastercard has taken issue with this claim and is now asking that Apple pay it \$300 million for the contract, stating that Apple has not fulfilled its contract obligations. This is important to understand because it seems that Apple decided to try and gain some goodwill by working with other companies in the tech sector – companies like Samsung and Verizon Wireless. It seems like this might have simply been an attempt to gain some market share in the payment industry, but as Apple has gained traction in the smartphone market, it's now hoping to make a big move in the payments industry. Apple is also working on its own payment
