HiBit Hide Folder Features: * Encrypt & hide files and folders on your desktop * Protect your documents and photos with optional encryption * Access to your hidden files and folders with a password * Easily access your hidden files and folders with a password * Backup your files anywhere with an external drive * Place your encrypted files and folders anywhere you want (Flash drives, SD cards, other media, etc.) Please see the example below. Hide files in some system folder To show the contents of any hidden file, you can just put the mouse cursor on it, and it will show the contents in plain text. File Name: any name File Size: any size File Type: any type HiBit Hide Folder is a tool designed to help you hide and encrypt the private information stored on your computer and hence, avoid accidental deletion or unauthorized access. Following a swift installation, you are prompted to provide a master password along with an alternative one just in case. The program comes with a bulgy interface that can prove a nuisance since you may have to switch to fullscreen in order to see all the functions and options available. Functionality-wise, the app is not exactly intuitive and hiding a file or folder is done via the context menu. It would have been great if the developer included some tips in this sense when you first open the app. A noteworthy feature is the Fake Folder, a function that enables you to hide any directory with another system folder form, such as Recycle Bin or My Computer, for instance. Therefore, if someone were to find and open your hidden folder, they are going to be taken to another system place. Works with all filesystems and can be placed on removable disks It is worth mentioning that the tool is compatible with FAT32 filesystem as it does not change it in any way and still maintain the hidden status. Nevertheless, according to the developer, it is safe to use the tool on NTFS as well as portable and removable disks, thus making it a good idea to carry sensitive data on a flash stick or perhaps an external drive. Despite the fact that it looks rugged and the interface could be scalable, so you do not have to switch to full screen whenever adding files and folders, HiBit Hide Folder could be a protection solution worth considering for protecting the data stored on your PC. For more functionality reviews, check out our other software reviews We are always afraid of losing our important data, e.g. pictures, documents and other files that we create on our computer using various apps. These data get deleted by accident while we are not paying attention. That's why many of us have started using different data recovery software to extract this deleted data. This software does not only make an image copy of the data, but it also works perfectly well in the areas in which your data got deleted or lost. If you too lost your data after taking a step back, and even after trying several other software, then get help from the Wistune Data recovery software. This software not only recovers lost data from your recycle bin but also from corrupted drive for example. The best thing about this software is that its scan the lost file formats like: JPEG, TIFF, PDF, GIF, and BMP. Wistune data recovery software is available in two different versions, one standard and advanced version of both the versions are free from any cost. On the basis of our experience, Wistune Data recovery software is a data loss recovery software which recovers lost data efficiently and quickly and it can recover from the following lost data:

- Deleted Files/Folders: If you have deleted an important file or folder, then you should use data recovery software in order to get that data back. If it is not recovered, then you may lose that data forever. In this case, a simple method would be to use a data recovery software to restore those deleted files and folders. This software scan the whole drive on which those data are deleted and recover them quickly and conveniently.
- Corrupted Drives: If your drive is damaged, then you may lose your data forever. In order to save data from a corrupted drive, then you can use this
