What's New in the Simple Webpage Capture?

Completely automated screenshot capture of a WebPage. The program works on any internet browser. The program will take a screen shot of your web browser when you click on a button. With just one click the program will take a screen shot of your web browser. The program is saving all screenshots in.png format. The user can choose to embed a watermark in the image file. The program will automatically size the size of your web browser. The program will auto fit the size of the page. The images are saved in the Pictures directory of your computer. All files can be rotated, saved as gif, jpeg, png, bmp, tif,... The Free Rev. 2.0 WebPage Capture application was designed to help you take a perfect picture of large WebPages. Site designers, people having trouble with a webpage, or just about anyone may have a need to take a screen shot of a webpage. But with many WebPages being large and rather long taking a screenshot of the whole page is a big task. But now this program makes it simple, with one click of a button the program will auto scroll the page combining the screenshots into one perfect picture. Making capturing a webpage simple. You simply resize the built in browser window to the width you want and the program will auto scroll the length of the page making one perfect picture of the page. The program doesn't scroll the width as fluid web pages make it impossible to set the proper width, so the user can set the width to anything they like as long as it fits on the screen. You can even load your own bitmap file for a watermark, making one less step for you to do and making things a little more simple. The program supports 5 file formats bmp, gif, jpeg, png, tif. The Free Rev. 2.0 WebPage Capture application was designed to help you take a perfect picture of large WebPages.
