*The Centralized Architecture Management solution (CAM), which allows automation of corporate business processes on AutoCAD, is based on the objectARX project. *A macro scripting language named MacroScript was added in 2006. Macros can be added to the AutoCAD application through the MacroScript. Macros allow complex user-driven programming of AutoCAD or other applications. A list of macro functions can be found at: ## 1.3.2 Precedence Constraints The most common constraint to a command (subroutine) is that the parent command must be executed before the command can be executed. If a command is specified as a prerequisite to the execution of another command, the command runs before the prerequisite. This is called a precedence constraint. The order of execution of commands is in the following order: 1. Substitute parent commands 2. Substitute prerequisites 3. Run command When a command uses an action as a prerequisite, the action runs after the command and the prerequisite. This is called an action constraint. A prerequisite that is not in the list of action constraints, or is an invalid command or an action, will fail the command. An action is only run if it is not on the action list of any of the action constraints in the command, or the parent command is an action. In other words, the action constraint forces the action to run, but only if there are no other constraints or conditions that would prevent it from running. In AutoCAD commands are coded to process control sets and it is up to the user to ensure that actions are run only when they are required to be. We will show an example here for Autodesk Revit: The command editor is shown with several relevant constraints: ## 1.3.3 Block Constraints The Block constraint is a type of command that is run before the execution of a command. These commands are used for system validation, and also to change the selection type of a command. The Block command runs before the command and can be used to change the block that is displayed as a selection method. There are several types of block constraints: 5b5f913d15
