But, some patients treated with β -lactam antibiotics may have Acute Kidney Injury (AKI). The aim of this study is to investigate the correlation between bactericidal activity of β -lactam and AKI in patients with CAP. A total of 254 patients with CAP were enrolled. According to the AKI diagnostic criteria of the RIFLE (Risk, Injury, Failure, Loss, End-Stage Kidney Disease) classification, patients were divided into the AKI group (RIFLE-R) and the non-AKI group (RIFLE-I, RIFLE-F). The correlation between serum bactericidal activity and AKI was analyzed. Serum bactericidal activity of β -lactam was lower in the RIFLE-R
