You can create document versions and you can control the user access to a document. OpenKM Reminders: 1. The OpenKM server is completely under maintenance. The

project is on hold until the

OpenKM X64

OpenKM Full Crack was initially built by a group of engineers working at Alcatel-Lucent. We are a small team of 3 people who wanted to improve the way that they share and manage their documents, by using a secure collaborative DMS. Since the announcement of this project, we have attracted a large number of users and we are happy to say that OpenKM Free Download is now used by a large number of small and large companies throughout the world. We are currently in the process of developing new features to improve OpenKM Crack For Windows even more. You can use OpenKM to manage your documents and collaborate with others. OpenKM allows you to: - Create different types of documents, including Word, Excel, PDF, Powerpoint, HTML, text and Java classes; - Store documents in a secure and privacy-protected way; - Share documents by sending them to other people and allowing them to share their own documents with you; - Manage documents using keywords and also put some information about the documents, such as the authors, the creation and modification dates, comments; - Search for documents by keywords, authors, topics and date; - Work with multiple groups of people, each of them working on his documents; - Organize your documents into a group, with the ability to share it with other people. You can also organize different type of documents together in one group, such as legal documents together; - Publish documents in the form of pages on our server. Not only you will be able to manage your documents using OpenKM, you will also be able to share them and collaborate with other people. You can send the documents to other people with their authorization and we even have some features that allow you to secure the documents. NOTE: OpenKM is not a replacement for the traditional methods used to organize documents. OpenKM is designed to be a tool for more advanced users who may need to handle confidential or restricted documents. System Requirements: To use OpenKM you need a recent web browser (we currently recommend Chrome, Safari, Firefox, Opera, Internet Explorer). OpenKM is built with Java technologies, which means you need a server running on a J2EE environment. To run OpenKM you need the following components: - Java 1.6 or 1d6a3396d6

OpenKM With License Code Download [Win/Mac]

OpenKM can be used to create a central repository for any number of users that can be accessed by a web browser. The system allows multiple users to work with the same documents from different places at the same time. Documents can be organized into a tree structure. Folders and the files contained within are subject to versioning. OpenKM is a very easy to use document management system. If you are not an expert in Java technologies, you can simply use the user interface, and do not need to learn anything. OpenKM Description: OpenKM is a very easy to use document management system (DMS). If you are not an expert in Java technologies, you can simply use the user interface, and do not need to learn anything. OpenKM is not specific to JBoss, but also works with other Java EE application server. The document management system works with Lucene search.
