Rails Installer is a one-way installer for Rails development. It installs all of the necessary packages required to quickly get started developing Rails applications. **Rails Installer Pricing and Upgrading:** Rails Installer is always free for active Open Source contributions, but commercial support is available for a premium fee (\$795 per month) and any new features that arise during commercial support will be released for free. **Rails Installer Upgrading:** Rails Installer is a one-way installer. Upgrading from any previous version of Rails Installer to a later version will require you to re-install Rails Installer from scratch. **Multiple cerebral infarction and cardiac pulmonary edema following hypervolemic hemodilution and transfusion.** The case of a 72-year-old patient is presented, suffering from multiple cerebral infarctions following a cardiac pulmonary edema after undergoing perioperative hypervolemic hemodilution and transfusion. Cardiac signs were firstly observed in the right arm, and later in the thighs and calves. Right cardiac catheterization demonstrated pulmonary capillary wedge pressure values of 40 mmHg and a left-to-right pressure gradient of 120 mmHg. The diagnostic workup revealed signs of hypervolemia and prerenal acute kidney injury; and the diagnosis of acute pulmonary edema with circulatory failure was established. During hemodynamic monitoring, a right-to-left shunt with normal atrial shunting was detected. Furthermore, a marked imbalance between the central venous and arterial CO₂ pressures was detected. Arteriography showed a significant stenocclusive lesion of the left posterior cerebral artery. After surgical intervention, an imbalance between central and peripheral blood volumes and an increase of the pulmonary capillary wedge pressure could be relieved. The patient was transferred to the intensive care unit and an intravenous fluid therapy with close monitoring of fluid and electrolyte balance was started. After 3 days, extubation was successfully performed and the patient was transferred to a rehabilitation department. If you like and use Facebook's PUBG, you may not like the news that it's gone off the rails. The massively popular "battle royale" game is reportedly no longer a safe place for anyone to be, with a player using a rocket launcher to assault a stranger in a church, and then a player luring a police officer into a gang fight, both leading to fatalities. The P
