What's New in the AutoCAD?

Drawing tools in the Graphics Task Pane: Drafting tools, such as snap, offset, and constraint tools, are moved into the Graphics Task Pane for faster navigation. Pen and arc tools are grouped together so you can easily and quickly switch between drawing and editing. The Graphics Task Pane is made more functional with the new Design Assistant, which displays and highlights tasks you need to complete. User Interface: Mouse: Add a new zoom level to the Mouse Zoom settings. You can also zoom in or out by using the scroll wheel or the menu item, Previous/Next Zoom. You can now use the scroll wheel to zoom in or out in non-DesignCenter mode. The hotkey legend has been removed. The input pane has been reorganized into a more logical order and is easier to use. The Input Display settings have been expanded to include more settings for the most frequently used tools. For example, the Selection hotkey for the Select command changes depending on the type of selection. You can drag any tool, shortcut, and quick menu item between toolbars to add it to a toolbar, or set it as the default button for a toolbar. New Snap Options panel for Snap settings has been added to the Options dialog, allowing you to see and change a setting at a time. Fonts: Replace your old fonts with new and updated fonts in this release. Layer styles: Create new style groups and customize the appearance of your layer styles. Improved ribbon navigation: Ribbon elements are displayed above the main drawing area, so you can see which ribbon element is selected even when you're working in the main drawing area. Ribbon layouts have been streamlined with more consistent page layout and easier access to ribbon commands. The ribbon display area has been reorganized to provide a more logical view of your content. Under the Surface node: The Polyline node now uses a 3D polyline, as it should. New brushes: The Brush command is now available in the Brush tool. Reshape: The Shape Properties dialog is redesigned to be more intuitive. Toolbars: The Extrusion Toolbar now allows you to select the side of the extrusion
