Very user friendly.Flames of War is a tactical turn-based battles game. It has been in public alpha since May 2010. Players take on the role of one of the participating nations of the Second World War and command their armies to fight it out on the battlefields and in the strategic arenas. The game is in active development by Angel of Death Games and is a continuation of the work done on the award winning game Flames of War the World at War. While Flames of War is set in a linear campaign of battles in Europe and North Africa from 1943 to 1945, Flames of War WW2 takes place between 1938 and 1943, before the bulk of the battles take place in 1944 and 1945.WW2 itself is a continuation of the setting and events of WW1 and as a result new units and scenarios have been created. WW2 is broken into 5 campaigns, the first of which will begin when the game releases for PC and Mac, with a dedicated alpha following in the same year. Project information About this mod Downloading file Info: Author's instructions Provided this is the first release for WW2 after its eventual release in Flames of War WW1, and we are still in alpha, 1d6a3396d6
