- MiriServer is a free and easy-to-use application to connect a remote control and your pc. - You can program the application with your own commands. - MiriServer is a good solution for multimedia-applications like Winamp, Xine, VLC, MPlayer and for PowerPoint presentations. - You can use your remote control in order to do the following tasks: \* Opening a PC-application \* Pausing and/or resuming a PC-application \* Paging up or paging down in Powerpoint - MiriServer can be controlled via a remotecontrol or via a serial console. \* Using a serial console is only possible in the first release of MiriServer. \* The different IR codes for the commands can be found here: \* In the menu bar of MiriServer you can chose a command to use a configurable shortcut. - MiriServer is available for Windows. - The download version does not contain a serial console. \* You need to use the latest Windows Serial Port Pack. - It's possible to use your remote control with different programs. \* On Windows Vista you need to install the Windows Remote Keyboard for this. \* Some programs doesn't recognize a keyboard without a special driver. For Windows Vista you need the free Windows Remote Keyboard ( \* On Linux you need to install a special driver for the remote control. - The source code of MiriServer is available. The first release of MiriServer is 0.9.0. - It's possible to change the hotkeys. - You can change the hotkeys with the editor. - You can use a configurable shortcut to use your remote control. - You can edit the commands to

## What's New in the MiriServer?

Miriam is a software for remotecontrol your computer in various ways. It is not a GUI-editor like Keyboard Maestro, although it can be used for that purpose. It is more a framework which helps you to design scripts and tasks to be executed with Miriam. Features: \* simple to operate for anyone: it can be controlled by keyboard, mouse or speech. \* It supports to remote control several applications with only one input device. \* you can define keyboard shortcuts, sequences, mouse clicks and voice comands. \* you can create multi step tasks, macros and automate operations. \* it supports to execute tasks at several points in time. \* you can design specific tasks to be executed on shutdown, user log off, time, date and more. \* you can display information or debug messages. \* it is compatible with several microcontrollers, so you can easily connect it to a microcontroller to automate operations on your computer. Requirements: \* Windows XP or higher. \* CPU with EPROM, if available. Installation: \* Run the first download. \* Install the setup into C:\MIRIAM\MIRIAM. \* Start the Miriam application. \* Add your USB IR-receiver to Miriam's settings. \* You're ready to go! Thanks to: \* Mr.Gali for the GPC macros Installation note: Miriam In the Windows Explorer, right-click on MIRIAM.EXE and click 'Run as Administrator'. When you start Miriam for the first time it will install the C# engine. You do not need to uninstall it before starting Miriam. Please uncheck 'Automatically Start Miriam' in the main window. Getting Support: For support questions contact [email protected] or submit a ticket to and an employee will assist you. Version history: 1.2: Fixed issues with the log file 1.1.0: Support for Windows 7 1.0.0: Initial release Attention! MiriServer is a free software with the open source license. It is not a traditional commercial product but the source code is available and you are allowed to share it with your friends. Just give us credit in your software in any way you want. Please send us your ideas, comments and questions! Follow Us 2018 yep, that's a date. I'll be blogging daily in 2018 as I plan to retire early in March. I have a dream, or more to the point I have an unfulfilled dream to retire at age 41. 1

---
