Hello, You are on the right place if you need a software able to convert your FLAC music files to MP3. It doesn't require the installation of third party applications and has, as you might expect, a rather easy process to master. It's the QuickCLIPlus MP3 encoder that enables you to do so. Its use is really easy and you can start using it right away. You don't need to go through a lot of settings and options in order to get the best results. You need to decide what encoding parameters you want to use and just choose the right one for you. After all, the QuickCLIPlus encoder can be configured in almost any way you want it. Features: The QuickCLIPlus MP3 encoder can be enabled or disabled when you need it to behave in different ways. For instance, you can enable it when you don't care about the quality of the output and have a playlist with only a few files in it. On the other hand, if you want to encode a full playlist, then it's the right solution. The goal is of course to have high quality output while only having a minimum of encoder usage. The output format of the QuickCLIPlus encoder is MP3 which gives a better quality than MP3 PRO. Why do you need to know this? Because MP3 PRO can be not only used as encoder but also as a sound file. Its quality is on par with MP3. However, it only supports a few parameters, the most being the bitrate. Supported Files: The QuickCLIPlus MP3 encoder can be configured to support the conversion of all the common audio formats. These include MP3, OGG and WAV. Supported File Formats: The QuickCLIPlus MP3 encoder can be used with FLAC files. It supports a wide range of common audio formats including MP3, OGG and WAV. Supported Parameters: The QuickCLIPlus encoder has a wide range of compatible parameters and settings. You can enable or disable bitrates or bitrates per file, sample rates, samples and a few other options. As you might expect, it has a variety of preset options that are shown when you right click on a file or playlist.
