Port of Onomichi The Port of Onomichi is a commercial port in the town of Onomichi, Hiroshima, Japan. Onomichi Port was completed in 1968. It was one of the first ports to have a direct connection with the International Container Terminal. It now handles container traffic from the Orient Express Line between Japan and the United States. There is also an on-dock container handling facility on the same site. The site was formerly home to a ship-building operation run by Mitsubishi Heavy Industries, as well as an offshore oil drilling facility, but this was decommissioned after the Fukushima Daiichi nuclear disaster. The following sentence is from the book "Progress to Success: A Cookbook for Little Appetites" by Dina Rabinovich, 2020. If you're still searching for your protein, your energy, and a mouthful of pleasure, try a new way to eat: the pile. What does "pile" mean? A: I'm not sure about the particular phrase used in the book, but "pile" generally means a big group of things. In the context you have, "Pile" in this sense is being used to describe the number of protein-based foods, and this food group is discussed in the context of trying to find them as a whole (hence the allusion to looking for "protein" and "energy" as well as "a mouthful of pleasure"), not as a meal item. Piles are sometimes used to describe individual objects, for example: I have piles of dirty clothes here. However, in the sentence you quote, it is being used in the sense of a large number of individual items. Similar phrases include: pile of food pile of clothes pile of books pile of furniture Determination of 8-oxoguanine DNA adducts in human brain tumors by HPLC-ESI-MS/MS. We have developed a sensitive and specific method for the determination of 8-oxoguanine (OG) DNA adducts by liquid chromatography with electrospray ionization-tandem mass spectrometry (LC-ESI-MS/MS) using OG-dG modified oligodeoxynucleotides as internal standard. The oligodeoxynucleotides were cleaved to the corresponding nucleosides and then were derivatized with 4,4'-dimethoxytrityl chloride. The resulting nucleosides were purified by solid-phase extraction and then separated on a reversed-phase column using the LC-ESI-MS/MS system. The detection limit was 5 fmol/injection for OG-dG. The assay was applied to the determination of the intracellular
