Autodesk's first major AutoCAD release in 1983 featured the ability to view parts of a drawing in three dimensions, with the user being able to rotate, translate and flip the drawing parts. AutoCAD's three-dimensional capabilities were first demonstrated to major users of CAD software in May 1984 at a press conference. The first release of AutoCAD for desktop computers with internal graphics controllers was in February 1985 and was a feature-limited version of the desktop app. The first release of AutoCAD for the Apple Macintosh was in May 1989. AutoCAD began supporting Windows 95 and Windows 98, as well as various Linux flavors, in 1999. AutoCAD today runs on Windows, macOS, iOS, and Linux. Releases The majority of Autodesk's releases have been called revisions. CAD releases are structured as follows: AutoCAD AutoCAD LT AutoCAD Mechanical AutoCAD Architecture AutoCAD Civil 3D AutoCAD Electrical AutoCAD Mechanical LT AutoCAD LT for Windows AutoCAD LT for macOS AutoCAD LT for iPad AutoCAD LT for Android AutoCAD Websites AutoCAD Tips AutoCAD Express Free AutoCAD Users Manual History AutoCAD 1.0 was first released in 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD was first introduced by Autodesk and its creator David Thiel at a press conference in May 1984, showing the first release of AutoCAD, a desktop application running on a Macintosh personal computer. The first version of AutoCAD was a feature-limited desktop version, which supported only three-dimensional modeling and display. When Autodesk released AutoCAD in February 1985, there was no support for text or raster images. The earliest releases of AutoCAD did not support drawing components (blocks), even though they had been available in previous versions of Cadastral. Blocks were first added to AutoCAD with AutoCAD 1.5, released in 1987. It was in the same year that Autodesk added AutoCAD's first object

So I have this assignment where I have a 4 times 4 matrix SAS and I am to write a function to multiply SAS by another matrix SBS. I have to use the index notation. I am not sure how to do this as I am used to using the position notation. Can someone please explain how to do this? A: First, you can use row/column notation for the index. In this case, this would be $\sum_{jk} S_{A_{jk}} B_{S_{jk}}$ This is the notation for matrix multiplication. Second, think about what index notation for a 4times4 matrix looks like. Let's say we're doing $S_{A_{jk}} = \begin{bmatrix} 1 & 2 & 3 & 4 \\ 5 & 6 & 7 & 8 \\ 9 & 10 & 11 & 12 \\ 13 & 14 & 15 & 16 \end{bmatrix}$ If we were to use the row/column notation for the indices, this would be 5b5f913d15
