In addition, in Windows 10, you can set up an event viewer, as well as ... Event Viewer in Win 10 ... - Event Viewer in Win 10 ... - Viewing events on the network - Viewing events in Windows Defender - Viewing events on your tablet - Event Viewer in Windows Server and Windows Server 2012 R2 - Event Viewer in Linux - Viewing events on Mac OS X - Event Viewer in Windows 8 and Windows Server 2012 - Event Viewer in Windows 7 - Viewing events on Linux - Event Viewer on Mac OS X - Viewing events on Windows Server 2008 R2 and earlier - Viewing events on Windows Server 2003 - Viewing events on Ubuntu Server - View Windows Events - Viewing Events and Auditing in MS Windows - Viewing Events and Auditing on Mac OS X - Viewing events on Windows - Viewing Events and Auditing in Linux - Viewing events and auditing in Windows - Event Viewer on Windows - Event Viewer for Linux - Viewing Events and Auditing in Mac OS X - Viewing events and auditing in Windows - Event Viewer and Auditing in Linux. They all provide the same event log management features. However, there are differences in Windows and Linux. In Windows, all events are written to the Windows Security log (Windows Security log events are also mandatory for Windows log events), while in Linux, Linux log events are written to the Linux log. In addition, Linux has several additional logs that are also written there. Let's take a look at the events for the Windows Security log. Here you can find the following types of events Microsoft Windows events are prefixed with MSG and also contain a type string: Event Type: Alert Event Source: Security Event Category: Security_Alert A Microsoft Windows event is a Windows Security log event and is mandatory for other Windows log events. In addition, this event contains data in XML format that can be processed according to your request.
