The major advantage of AutoCAD is the integration of drafting, design, and management functionality into one integrated application. Like many other software companies, Autodesk has built a business on software applications that combine several different applications into a single platform. This is referred to as "application platform management." AutoCAD is structured into five major applications and several sub-applications. The five major applications are as follows: Draftsman - provides basic 2D drafting functionality for drafting in paper and on the computer screen. This includes creating, editing, and viewing 2D shapes and using a drawing ruler and perspective tools. Map Info - provides data management capabilities to support 2D drafting. For example, it enables the user to import and export drawings to other formats, see feature definitions, and define dimensions of objects and spaces. Draw - provides the 2D drawing functionality. It enables the user to draw lines, curves, circles, arcs, and polygons using the mouse and pen. Model - provides 3D modeling functionality for creating 3D models of objects. It is a key feature of AutoCAD. Raster - provides the functionality of creating and editing raster images, or bitmap images. Sub-applications include: Tools - provides the functionality of using predefined tools (e.g., drill, chisel, jigsaw, saw, etc.) to perform 2D drafting operations. Labs - provides the functionality of creating 2D models that can be viewed on paper

With a little luck, I'll be taking over for John Ritter as Executive Editor for both The Comics Journal and The Believer. While I'm the new editor of the magazine, it's an open position — hence, I've been presenting every issue in this format, starting with the current one and continuing with each issue leading up to the one I'm leaving behind. The first time I ran this was as an experiment, but I'm going to keep using it until it becomes too much of a bother for the other editors to spend time in the all-important "dead zone" — the portion of the current issue with no new comics. As each new comic is introduced, I'm going to write about it. If I haven't yet said it's autobiographical, it's autobiographical. If I haven't yet said it's autobiographical, it's autobiographical. I'm starting with the comics I'm interested in — not the comics other editors think are most interesting or accessible. If you're looking for my take on big-name books or celebrities or sports, I'm not the guy to ask. Police board president Christiane Vadnais, who worked on the plan with the chief, said Monday she has asked Parent to stand down as the force's top cop. "I want to be clear: I want to bring in a third person in this role," she told the Star in an interview after a board meeting. The civilian position has existed since 2002, when the city created a single civilian board that oversees all the forces, yet its budget and authority has never been clearly defined. It was supposed to streamline the way the city's police forces interact, but those were never established, and the force remains split between five boards that oversee different aspects of the job. Vadnais said she is setting up a committee that will look at "different ways" to bring police forces under a single command, "including having a police chief," she said. "It's very important to me that this move (to create a single police force) is done through consensus," she said. Article Continued Below Vadnais said she is "in discussions" with several police commissioners and administrators from the various police forces. She wants to begin consultations within a month, and a mandate will be put to a vote on the board next month. The move is also raising questions about the politics of the police board and how Montreal's political leaders will respond. The Liberal government, which is the police board's biggest funder, has also resisted the move. On Monday the government's public safety minister, Steven Blaney, said the issue will be discussed "with the Montreal police." "We are still working with them, and we will have discussions, but it's good to see that we have always been in touch and supporting the chief
