The Fret Dimensions is the most accurate fretboard dimensioning software available. It covers guitar sizes from 4/4 octave fretboards to 12/12 string bases. Fret Dimensions is friendly to the traditionalist and the spreadsheet programmer alike. It's the easiest way to dimension guitar frets. A new, intuitive, and user-friendly interface has been added since the last upgrade. Fret Dimensions 2.0 still contains all the great features that made it a popular choice. Whether you're building a fretboard to your specifications or designing your guitar's fretboard, fret Dimensions can handle it. By simply choosing a size fretboard from the selection list, Fret Dimensions will calculate the relevant fretboard dimensions. For those of you who prefer a more traditional method, fret Dimensions offers the following tools: Calculate Length of String Calculate Width of String Calculate Strings on Fretboard Fretboard Dimensions Calculate Neck Length, Width, and Depth Degree of Neck Trussing Strings on Fretboard Dimensions Calculate Fretboard Width Calculate Fretboard Length Fretboard Center to End Degree of Neck Trussing Calculate Offset from Frets Offset of Fret from Bridge (depends on string length) Calculate Center to Ring Calculate Neck Width Calculate Neck Depth Calculate Offset from Neck Calculate Center to End Calculate Center to Bridge Calculate Center to Offset Offset of Frets Bridge Dimensions Fret Dimensions is a useful design solutionl for guitar builders. Craftsmen will appreciate the instant measurement display, which updates each time a new fretboard length is selected. Complete with an intuitive interface, it's extremely easy to use. Stringed instrument designers will find it more efficient than traditional calculation methods. Nut to bridge lengths can range from 100 mm to 1000 mm, providing the required interval measurements for virtually every fretboard design. Engineered for the highest accuracy in stringed instrument fretboard marking, you can't build without it. Measure and calculate fretboard lengths and spacings in micro inches or millimeters. Differentiated from other fretboard applications, Strings! calculates not the nuts, saddle, bridge and body, but nut to saddle, saddle to bridge and bridge to nut measurement. This allows the user to calculate the actual fretboard length without the potential for calculation errors introduced by normal applications. The application calculates the fretboard length in several ways: 1) By string length. 2) By string position. 3) By fret spacing. 4) By string finger spacing. These options allow users to produce either side of the fretboard. The most accurate calculations are produced by using all four of the options, but it is perfectly acceptable to use more than one. Additionally, fretboard lengths can range from 100 mm to 1000 mm with the highest accuracy available. And with this application, fretboard dimensions can be automatically updated to automatically display when the fretboard is selected. Precision measurements are reflected in detail in the display and are easy to record. Even as accurate as the multiple options of applications like Fret Dimensions Serial Key are, they are limited in their precision. In this application, accurate measurements are available, but it is not necessary for accurate fretboard design. Moreover, it is a convenient calculator and is much more efficient than other applications. It is easy to use. What's New: - Minor update Key Features: ● Very accurate and easy to use fretboard calculator ● Accurate measurements available in all 14 positions ● Super easy to use ● Accurate fretboard dimensions available in all 1000 mm ● References available for all positions. ● Fretboard dimensions can be displayed as the fretboard is selected. ● Can choose between linear or logarithmic scales ● Widely adopted measurements within the industry. ● Easily readable and easy to use. ● Can generate full fretboard, half fretboard and half fret spacing ● Works well with frets, strings, and frets/strings. ● Original and famous brands in the guitar world: Schecter, Floyd Rose, and Jackson. ● Measurements available to 5 decimal places. ● Used by guitarists and builders in all countries. ● Tri-Axial and circular fretboard models available. ● Generate fretboard, half fretboard, half fret spacing or distances in half and whole steps from 0 to 100,000 mm. ● Includes multipliers. ● Strings!
