If you are interested in learning how to take images to the next level and start producing your own editorial photos, flip to Chapter 7, where I introduce you to Adobe Photoshop Elements. Creating a Content-Packed Website If you read newspapers and magazines, you can probably relate to reading print on paper. Most magazines are usually packed with images to get the reader's attention or tell a story in full color. Although newspapers are often black and white (or monochrome in some cases), they still have very appealing pictures that set the mood and tell readers about the information. Website design is exactly the same way. If you are going to be in the business of creating and promoting websites, you need to be well versed in photography and graphic design skills. You also need to know how to create and organize content, connect to the internet, and create media-ready websites. You can spend a small fortune on the best web design programs or purchase them for a reasonable price at many retailers, but many of the most useful programs are free to download. The cost of websites is very low. If you plan to publish only one, static, informational website, you can probably get away with free web hosting. Doing web design Of course, you don't need to learn web design unless you want to create dynamic websites or you're publishing your own website. The focus of this section is on designing websites using photoshop, but you will want to be familiar with a few basic design principles so that you can step outside the Photoshop environment at times. Designing a website involves the following: Creating a page layout: You'll most likely start with a page layout or template, which usually includes an HTML and CSS3 code editor, a digital photo editor, and the addition of a stylized contact page. Designing a layout with graphics: After the page layout has been created, you can begin designing the web page using your own original graphics and photos. Designing an XML code: This is the 'meat' of the website design. You can take the text and graphics you create and add them to the "soup" — that is, the XML code. Designing websites at multiple scales It's easy to design a website for a static web page, but if you want to create a website with a dynamic display, you can. The CMS WordPress (a variation of the usual CMS) gives you a blank slate to display pictures

Former Barnet residents are calling for an investigation after a 72-year-old man was run over and killed as he walked down the street. George Tzioras, a Greek Orthodox priest, died after he was hit by a Range Rover driving more than 50 miles per hour in High Barnet, North London, on Sunday afternoon. It is understood that he was hit twice, and was pronounced dead at the scene despite being rushed to Barnet's Royal Brompton Hospital. The van driver was arrested on suspicion of causing death by dangerous driving, and was discharged while inquiries continue. Mr Tzioras, who was an honorary chaplain at Barnet Council, became a parish priest in Woking, Surrey, in 2013 after serving at Westminster in London for more than 30 years. In a statement released today, the Greek Orthodox Archdiocese of North and South America said: "The Archdiocese is deeply saddened by the death of Fr George Tzioras, who was a parish priest to the Greek Orthodox community in Washington DC from 1992 until 2013. "Rev. Tzioras served the DC Greek Orthodox community in north west and northwest London. His ministry was anchored in the Greek Orthodox Church and he ministered to the needs of the community and fellow Church members from his church in Hendon. "The Archdiocese offers the community of St. Athanasius its prayers and support during this time of hardship." A spokesman for Metropolitan Police said the incident is being treated as "fatal collision". Nanostructured TiO2/In2O3 heterojunction photoelectrochemical cell with enhanced photocurrent: a density functional study of light harvesting and electron-transfer dynamics. On the basis of the optical absorption and density functional theory calculations, a strategy has been developed for constructing a nanostructured TiO2/In2O3 heterojunction photoelectrochemical cell for the enhanced photocurrent. A series of composites consisting of In2O3 particles embedded in a TiO2 nanosheet has been designed for investigation. The incorporation of In2O3 into the TiO2 nanosheet can dramatically improve the light-harvesting efficiency and charge transport, leading to a dramatic enhancement of photocurrent and power conversion efficiency. The light-harvesting and charge-transport processes for the TiO2/In2O3 heterojunctions have
