# GETTING STARTED Regardless of whether you want to create your own fine art or edit professional photography, the first step is to select an image to work on. Create a new image with a resolution of 72 dpi (dots per inch), unless you want to crop an image to make it smaller, in which case you will create it at 300 dpi. (See Resizing Images for more on that.) It is important to select an image type that is appropriate for the type of work you want to create and to keep in mind the image editing and enhancement steps that are listed later in this chapter. After you have a suitable image open, you will edit it using the various tools in Photoshop or the built-in tools in Elements. \*\*Tip:\*\* The \_Advanced Photoshop CS6\_ (www.adobe.com/uk/products/photoshop.html) section in the CS6 program introduces a new, easier way to select and deselect images and can make it easier for beginners.
