Connex Network Manager [Mac/Win]

The Internet comes with a number of applications that you could use, regardless of your profession. One of them is Connex Network Manager. It's designed for Network Administrators to manage all devices in their network and run scheduled tasks or scripts. It also lets you view device details and properties if you want. Sleek and modern graphical interface The application installs quickly and it sports a really modern and intuitive graphical interface with many useful tools at hand. It doesn't come with any customization options, which means that you won't be able to make any changes to the application's interface. Still, it comes with an extensive help section that has lots of instructions and tips that you can use in order to get accustomed to the application's features. Manage multiple devices in your network It lets you add as many devices as you want in your network and

manage them easily. The split screen lets you access multiple sections and use lots of tools in order to manage devices. You can add routers, switches, workstations, servers, desktops, laptops, printers, desk phones and even smartphones to the network. It allows you to place icons anywhere on the screen, so you can manage them easier. You can choose from multiple connection methods, including Telnet, SSH or RDP. Terminal settings are also available, together with the Putty location. Some more tools It allows you to schedule scripts, you simple need to input the script, set a frequency and a time if you want. Click on a device to view properties and adjust them. You can send emails directly from the application, but you need to set SMTP settings first. Save the graph on your computer or print it easily. All in all, Connex Network Manager is a useful software solution that allows you to manage multiple devices on your network and export the project easily.
