Changing the layering order You can change the order in which layers appear on the screen by dragging them up or down in the Layers panel or by using the Order submenu in the Layers panel. Photoshop enables you to produce all sorts of startling effects by selectively hiding and showing layer images, moving them, or flipping them upside down. You may want to hide layers that you're not working with to keep Photoshop as compact as possible.

Q: convert string output of a command to int? I need to make a simple program that prints out scores of an int but I can't figure out how to convert the string output to an int? int main() { int scores[] = {20, 30, 10, 20}; int i = 0; while (i!= 4) { cout > x; std::cout A new paper in the Proceedings of the National Academy of Sciences brings up the issue of whether the life sciences are advancing due to the "publish or perish" effect or by genuine technical progress. By Mona Nemer and Joshua Gans The bioethicist James Shapiro reported in the New York Times that medical advances are "increasingly being dependent on the increasingly more politicized peer-review process," and that the process is "as fraught with potential bias as are the deliberations that the jury renders in a criminal trial." The Science of Science article that accompanied the Times piece points to the conflict of interest facing editors of journals: if they publish or perish, they make money whether their papers get accepted or not. Economists might find this counterintuitive, but the fact is, some journals aren't just profitable, they're highly profitable. For example, the Journal of the American Medical Association (JAMA) came out with a substantial profit margin in 2017. There were a number of factors at work, but one of them was the fact that JAMA has recently undergone a "co-branding" with the New England Journal of Medicine. So instead of the usual 50/50 split of profits, JAMA earned 34.5 percent (rather than just the usual 9 percent). Naturally, one can find examples of successful research-based journals at all points in the profit spectrum. But the problem is that, the most profitable

1031 Exchange Articles Call 1031 tax deferred exchange Article contributed by Richard Bragdon, President of Excelsior Capital, LLC. The 1031 Exchange is a method of investing that allows the exchange of one property for another under certain circumstances. It has become increasingly popular for a variety of reasons, including maximizing capital gains through short-term holding periods. The 1031 Exchange is a type of rollover which is usually used to avoid capital gains taxes. "1031 Exchange" is defined as a method of capital gain deferral or retention. The advantages of the 1031 Exchange are: the ability to defer capital gains taxes, minimize capital gains taxes on the exchange property (exchange), capital gains taxes on the purchased property. The IRS Code requires that every exchange under 1031 must be recorded with a schedule of transfers. The 1031 Exchange is one of the few investment strategies which the IRS allows you to record as a direct transfer of ownership. Example: You have a rental property that has just increased in value by 10% and are contemplating selling the property. 3. Sell the property to a buyer. 4. Continue to pay rent on the property that you would have been paying in a normal situation. The difference in income tax you pay on the property sold versus the one you are retaining will result in a net tax savings. Of course, the 1031 Exchange may not be the best strategy for every situation. If a particular property is experiencing consistent declines in value, the 1031 Exchange may not be the best choice. Whether or not you use the 1031 Exchange to defer capital gains taxes is entirely up to you and is an important decision to make. How Does the 1031 Exchange Work? The key to a 1031 Exchange is the rollover. This is a method whereby your property is transferred to the new owner under certain circumstances. Specifically, under the 1031 Exchange, you can retain ownership of one property and roll over the gains into a new property. Before you begin, it's important to understand the qualifying rules for the 1031 Exchange. All properties must be real property, or business

assets that generate passive income. An example would be rental properties that generate rental income (i.e. restaurant, hotel, etc.), however, the main point is that you must be holding real property in order to qualify for a 1031 Exchange. If you do not meet this qualification, you may purchase a new
