Like other graphics programs, Photoshop has a fairly extensive menu system that can be daunting to a novice, but many advanced features can be accessed through keyboard shortcuts. At the time of this writing, the current version of Photoshop is 11.0. In this chapter, you use Photoshop Elements to create images that can be cropped, formatted, and modified through various editing techniques and layer overlays. In addition, you get tips to speed up your workflow. Creating and Cropping Images To begin with, you can create a new image from scratch or open an existing image in an existing document. The next step is to crop it so that it's the right dimensions for the size of your creation. You may need to work in the context of a Creative Cloud site or your local network. If you have a Creative Cloud site, use the sharing and document management features of Photoshop Elements to access your site's content. Cropping an image To crop an image, follow these steps: 1. Open an image. This image is a picture of a woman taken on the beach. 2. Place the image you want to use as the background of your image on the background area of the Layers panel. 3. Click the Crop tool on the Toolbox. 4. Drag the Crop tool over the image. 5. Hold down the Shift key (Windows) or Ctrl key (Mac OS) and drag the corners of the crop box around the image. By holding down the Shift key, you can crop the image by moving the box off the image, instead of adjusting the corners. 6. Release the mouse button. 7. Photoshop Elements displays the image inside the crop box and opens a Navigation pane with thumbnail previews of the image so that you can see how the crop is affecting the image. 8. When you like the result, click the Save icon, as shown in Figure 5-1, to keep your crop as a second layer inside the image. Alternatively, you can move the crop into the top layer, rename it, and then use the Crop option to remove it from the top layer and put it back in the background layer. **Figure 5-1:** Use the Crop tool to crop your photos to fit a desired composition. Photoshop Elements can be hard to master for beginners. Therefore, many Adobe marketers promote the program as a way

In preparation for a planned collision between a Super Mario and a Ghidorah, Japan's Shibuya 109 shopping arcade is now asking visitors to sign a waiver. One that includes disclaimers about being stupid. We're not sure how this bit of misinformation came about, but apparently it's just a form that will need to be signed if you want to enter the maze of shops and stalls that are lined up in Shibuya. The form is apparently meant to assure the stores that it's a walled-off space, and that they won't be held liable for accidents that happen on the premises. But then it goes on to say that they won't be liable either if a customer decides to "be stupid," so they may as well be prepared for that. Update: The Japanese Kanreki website has a translated version of the form: Here's what it says: "1 - I want to go inside the premises voluntarily... "2 - I agree to assume all risks and all liabilities. "3 - I agree to assume all risks and all liabilities. "4 - I agree to assume all risks and all liabilities. "5 - I do not want to get involved. "6 - I want to get involved." Oddly enough, someone apparently put the edited form online, because here's the original version that was posted to the Japan Kanreki website: It's a pretty different tone, I have to say. The Master of Orion II remaster is going to need a fresh coat of paint, if the listing on the site of the developer is accurate. The company looking to capitalize on the game has posted a job listing on the site that states they are looking for a concept artist with at least a year's experience. The task listed involves creating assets "intended for use in a digital re-imagining of the classic science fiction empire-building game by Stardock Studios entitled: 'Master of Orion 2'". It requires a good eye for detail, with a strong understanding for "creating art for the fiction-driven game". Some artistic output of the game will be needed, to provide "the look and feel of this new science fiction universe for which it will exist". A high-end graphics tablet is also required, with "a good design software package and the
