Photoshop is an editor of raster images, which are images based on a grid of numbers, or pixels. You can create images in Photoshop and then copy them to other programs to work on them in those programs.

This enables you to work on an image by using an editing tool that you know and love, then transfer the edited image to the program that you prefer to use for the actual work. You can work with the pixels of an image directly, if you like.

You can also work with raster images and place them on a canvas, as explained in the next section. ##

The Basic Way to Work with an Image You can work with a raster image in two basic ways: \* Use the image as a source of pixels for your work in a digital image editor \*

Use the image as a background for a page in a word processing, graphics, or web-publishing program I cover both of these methods in this section.

Spin crossover in cobalt(III) 1,2-bis (2,6-diisopropylphenyl)-1,2-ethane dithiolate(III). The molecular structure of the molecular spin crossover salt [Co(C(15)H(26)S(2))(C(6)H(4)Me(2))](PF(6)) has

been determined by X-ray crystallography at 110 K. The crystal contains one molecule per asymmetric unit, and the asymmetric unit of the crystallographic cell contains 4 formula units. This centrosymmetric salt crystallizes in the triclinic space group P1. The Co(3+) ion in the molecule is displaced from the center of symmetry, and the two crystallographically independent molecules in the unit cell are related by a pseudo-translation

operation. The two molecules differ slightly in the angles between the two pendant organic molecules of the diphenylpyridine ligand. The Co-S distance is 2.1175(8) A, and the N-C distance is 1.3849(18) A in the molecule in the asymmetric unit. Photodisc, a company which produces blank discs for data storage, has published their annual profits report. The company which primarily sells CDs and DVDs noticed a drop in sales from the previous year. The reason is

obvious: The downturn in the economy. For the full financial year of 2008, Photodisc posted a loss of around €6.2 million. However, according to the same report, the company is planning to increase their sales by about 15% in 2009. It is safe to say that Photodisc, despite losses for 2008, would be one of the companies to watch in the upcoming years. Some background info on the company is that they are a Hong Kong-based firm started in 1997. They have several subsidiaries as well, and

employ nearly 7000 staff. What are the real estate transactions like in Vancouver?
