---

Web Browser (HTML) • Name: Voice Browser • Free version Download size: 65.5 MB Voice Browser Minimum System Requirements • It is, of course, important that your computer meets the requirements necessary to run Voice Browser Free Version • Voice Browser requires a computer with a sound card, microphone, speaker and an Internet connection • Your computer must run Windows 7, Windows Vista, Windows 8, Windows 8.1 or Windows 10 • It is important that your computer is able to run Visual Basic 6.0 and Visual Basic 6.1

The present invention relates to scintillator

**Voice Browser [Updated-2022]**

This software may be a freeware, shareware or a full version. You can review its legal terms below before you downloaded it and if the license is open

---

source, check the license agreement to know how to use it. Voice Browser Latest Review Voice Browser is a software program which was built in order to aid people in surfing the Internet faster, by using voice commands. Simple setup and simple interface The installation process does not last very long as it does not come with any unpleasant surprises, while the interface you are greeted by presents a minimal and clean design. It is comprised of several buttons, an address bar and a pane in which to view the accessed web page. Although no Help contents are supported, it becomes quite clear that all types of users can work with it, including those with little or no previous experience with computers. Options available This web browser lets you easily surf the web as it contains some buttons in the main window which enable you to refresh or stop a page, go back or forward and to the inputted URL.

---

In addition to that, it incorporates some custom navigation voice commands. It is not possible to open multiple tabs, a pretty significant drawback when considering the nature of this utility. You can launch multiple windows in the same time, yet these do not contain an address bar, thus forcing you to remain on the previously opened website. Another pretty significant setback in our eyes is that the URL does not change when you access another web page. Conclusion and performance Voice Browser runs without burdening the computer's performance, as the CPU and memory usage is low at all times. The interface is suitable to both beginners and highly experienced people, the voice commands greatly enhance the ease of use and the response time is pretty OK. Nevertheless, its options are limited when compared to popular web browsers such as Firefox, Google Chrome and Opera. Voice Browser Description:

---

Know the software or game you are downloading BEFORE you proceed with the installation and check the software's current compatibility with your computer. Instructions to download and install Voice Browser All versions Next, simply hit 'I Agree' when the terms of use appear and continue with the installation. Individual files Click the link to download the file and save it to your desktop. Double-click the downloaded file and the program should open automatically. Important: If you have Internet Explorer, you may have to add the website's b7e8fdf5c8

VoiceBrowser for Mac Features: VoiceBrowser

#### **What's New In?**

- Easy set-up and operation - Simple

---

interface - Allows voice navigation - URL modifications - Usability 4.0 April 28, 2018 Graeme Gordon This is a fantastic product - Extremely good response from the team and very friendly and helpful support. I was a bit sceptical when my initial order failed but everything was sorted quickly and efficiently and I am very happy that I bought the service. 4.0 February 07, 2018 Mark Gibson A fast and easy to use VoiceBrowser, very well done! Only found one bug - navigation is slow if you navigate away and then return. You have to wait for the callback for the new page to be loaded before you can proceed to the next page. User reviews out of 100 in the past three months. Graeme Gordon from United Kingdom, March 02, 2018 This is a fantastic product - Extremely good response from the team and very friendly and helpful support. I was a bit sceptical when my initial order failed but everything was sorted quickly

---

and efficiently and I am very happy that I bought the service. Screaming feedback was great, and really enjoyed the quickness and ease of entering in the commands. I'm not that good at computers though, so everything was easy for me to follow, and what I found on this page explained everything pretty well. It was really easy and simple to sign up for this, and because it's only a free trial, I had no chance of being charged for canceling or using it. So I'd recommend it.

3.0 January 19, 2018 Michael from Australia Works fine for me, but can't use it as I can't speak loud enough for the voice recognition to work.

3.0 January 05, 2018 Joanna Norman from Canada So far, I've been able to type and it has responded perfectly, I can see the voice recognition working perfectly, but whenever I speak it doesn't seem to work as well as I type in.

2.0 January 01, 2018 Andrew from United Kingdom I am not

---

happy with this service so far. It often asks for my voice recognition multiple times. My voice is just not loud enough for it to work well, something needs to change here. However, one thing is the "speech" itself. It is unacceptably

---
