The result is a more realistic and authentically physical football game with the tactile control, spectacular visuals and gameplay not seen before in FIFA's simulation series. The HyperMotion tech also allows for incredibly realistic ball physics, more intricate animations and the ability to create more realistic player and ball movement models. The HyperMotion tech uses motion capture data collected from 22 real-life players during a full FIFA match, in high-intensity suits for advanced player movements. The collected data is used to power gameplay as well as player and ball physics. Experience the ultimate in player movement and ball physics as you strike a decisive blow, receive a game-changing pass and progress through the pitch. Let the game tell the story of your next goal: Cinematic Player Animation - With new animation workflows and improved cover visuals, players can experience a more lifelike way of moving, as they run, jump, turn and engage in massive tackles. Multi-camera shot technology - With new multi-camera technologies, there are now more angles and perspectives you can choose from to create your own player animation, using BodyType, SpeedType and any other animation sequence. Players can be caught offside in any angle, and can be shown either in motion capture match or inside the goal. Exciting player controls - Control the ball and your teammates with new Stepstick movements. Stepstick allows players to steer the ball and their teammates more naturally and intuitively. Intricate animations - All-new animations increase the authenticity of the player. New ball physics means that the ball will swing back and forth and spin freely in the air with the weight of the pass. Reflective mesh surface - New reflective surface will bring the pitch to life and bring out its distinctive features. A mix of authentic and new graphics on the pitch will help you become connected with the game. Pick-up-and-play game - Step into a stadium and be immersed in the action with new features that will fit into any gameplay experience, including new stadium kits, marketing material and a new presentation of the pitch. Digital player likeness - Not only will you have more variety in the way players are brought to life with the new motion capture workflows, but facial scans are also applied to bring even more individuality to the new avatar features, including new player stickers and tattoo creation. Manage the tempo - New tempo control will allow
