Buy GIGABYTE GA Z390 SOC FOR DUALBIOS M BRIEF HOW TO INSTALL? 1). 1. You may need to install Windows 7 or 8.Q: Update a column based on values in other table Using MS SQL Server 2008 I want to update a column in one table based on the values in another table. If the values are found in the ref_num column of tbl_search I want to populate the location column with the location of the row. If a location is not found for the ref_num I want to leave the location empty. I have tried a couple of ways but can't get anything to work. My working query is as follows: UPDATE tbl_search SET tbl_location.location = (SELECT location from tbl_search where tbl_location.ref_num

= 'AP24099') However, I would like to create a stored procedure instead of doing this in an sql query. This can be done with a series of IF statements if possible. A: Try this with a CROSS JOIN from UPDATE tbl_location SET location = (SELECT TOP 1 location FROM tbl_search
