Autodesk Revit LT 2021: 828M1: Autodesk Robot Structural Analysis Professional 2017, 547I1.The field of the invention relates to aircraft landing gears, and more particularly to a system for guiding the wheels of such a landing gear as the landing gear is unfolded from a folded position. Folding wing landing gears are known. A typical landing gear includes a pair of wheels rotatably carried at the ends of respective wheel shafts. The wheel shafts are pivotally secured in suitable mechanical relationship to a center beam of a link assembly. The hub of one wheel is disposed in tight fitting relationship with the smaller diameter end of the center beam; and the other wheel, which is of the same size and contour as the first wheel, is disposed in tight fitting relationship with the larger diameter end of the center beam. The hub is also secured to the larger diameter end of the center beam by a threaded securing member passing through a hole in the hub. When the landing gear is to be folded, it is removed from the wing. When the landing gear is to be unfolded, the threaded securing member is rotated 90.degree., and the landing gear is pivoted from the folded position to an unfolded position. The landing gear moves in a forward direction as the securing member is turned. This unfolds the landing gear to a position where the wheels are immediately adjacent to and on the surface of the runway. Typically, the wheels of landing gear are guided along the longitudinal axis of the landing gear by a spring. The wheels move forward with the landing gear as the landing gear unfolds because the wheel shafts are rotated to a position adjacent to the smaller diameter end of the center beam. Once adjacent to the smaller diameter end, the wheel shafts are restrained

But Google is trying to fix that by announcing it's rolling out a new feature that will allow users to easily delete up to 30 tabs from the browser. In a Google Chrome announcement, the company said it was rolling out a new feature called Tabs Overflow that lets users view all 30 tabs before pinning one to view for a particular browser window, or "tab." From there, users can click on each tab to remove it from the browser history. "Once you delete a tab, it's gone forever," the announcement said. "If you want it back later, you'll have to open the browser settings and add it again." The company also said that the feature, which is currently available in the latest Canary version of Chrome, is working on adding other features, such as setting a default number of tabs or hiding tabs from view, and will be available in the Chrome stable release in the coming weeks. The change is likely to please many Chrome users who

have complained about seeing a lot of tabs in the history, which can be difficult to manage. It's also likely to please Google, as its main competition in the browser space — Microsoft's Internet Explorer — doesn't offer this feature. Instead, the company just wants to be flexible and offer users the right mix of features as they're looking to use Google's browser.The implications of features that reflect the ionization potential and charge density of carbon nanotubes. Raman spectroscopy was used to investigate the features associated with the ionization potentials of carbon nanotubes and related compounds. Based on the results from Raman spectroscopy, in situ conductive AFM was used to measure the electrical properties of nanotube films. The results reveal that the bias stress-induced conductance change in
