Q: Singleton object What I'm trying to do is to make a singleton object. I have a Sample class which has a variable name: package test; public class Sample { public int a, b; public Sample() { a = 5; b = 10; } public static Sample getInstance() { return new Sample(); } } And in the main() function, I'm calling Sample.getInstance().a; like this: package test; import java.util.Random; public class Main { public static void main(String args[]){ Sample s = Sample.getInstance(); // Calling s.a; // This line. // How do I access a without passing it? } } I know I can make a function like this: public static Sample getInstance(){ return new Sample(); } But I have other things in the class, e.g. getInstance() method, which is static as well. So I can't just call getInstance() method without the name. How do I resolve this issue? A: You need to call getInstance() as an instance method, this allows you to create the instance first. Sample s = Sample.getInstance(); s.a; // or getInstance().a; Investigating the mechanisms of signal transduction in neonicotinoid-sensitive cells using modified light-sensitive chemicals. Neonicotinoid insecticides are widely used in insect management but are a threat to non-target organisms because of their persistence in ecosystems and in the environment. This work shows that prolonged exposure to sublethal doses of acetamiprid and thiacloprid induce physiological changes in a neonicotinoid-sensitive cell line (PC-3) and in three different transgenic insect models overexpressing the honeybee melamine-glutamine synthetase (mCherryGUS). After 36 h, thiacloprid provokes an
