Q: Force the reset of "safe search" on youtube for a mobile app I am building an ios app that allows the user to login with their google account and upload videos to youtube. I have done this and have managed to retrieve the video id and pass it to a webView so that it can be played. The problem however is that the youtube mobile app has a feature that allows the user to use "safe search" and filter out certain words and phrases from the search. The video uploader doesn't have any of this and I can't work out how to force the youtube android app to perform a new search with an empty query so that this "safe search" feature doesn't affect the play of the video. So far I have attempted to set the query equal to "", but it only allows for the removal of words like ", ", or ")". Anyone know how I can pass a dummy query to the youtube mobile app so it performs a new search that doesn't include the "safe search" features? A: iOS does not allow to clear the query string, you would need to clear the search history. From the YouTube API, scroll down to and you see a method called clearHistory() that you can use to clear the current search history. Q: VB.NET first letter capitalization So I have the following code Protected Function Capitalize(ByVal text As String) As String Dim capt As String For Each c As Char In text If c.ToUpper IsNot Nothing Then If Char.ToUpper(c) = Char.ToUpper(c.ToString) Then If (Capt Is Nothing) Then Capt = c.ToString Else Capt = Capt & " " & c.ToString End If
